

Overview of the e-Learning Portal solution for companies

About the system

Our solution allows for the quick deployment of electronic learning at any company, providing a framework and process management for e-learning with the help of the SharePoint 2007 portal.

e-Learning Portal supports the very latest trends in corporate electronic learning, covering the complete e-learning process cycle: from the creation of learning materials and tests to courses, assessments and the granting of certificates.

Tasks

e-Learning Portal will help your company to carry out the following tasks:

- verify the qualifications of employees and applicants
- staff assessments
- providing constant training in new corporate standards, products and services to employees in branches and remote offices
- reduced expenses for personnel training
- constant monitoring of employee qualifications
- inclusion of indicators of personnel qualifications into the indicator systems for the company

Functions

The system's features encompass all aspects of the electronic learning process:

- Content
 - creation and editing of learning materials
 - catalog for storing courses and tests
- Organization of the learning process
 - organizational structure support
 - learning groups
 - curriculums
- Learning
 - assessments

- communication (wikis, blogs, Microsoft Unified Communications)
- personal portals
- alerts
- Reporting
 - standard reports
 - OLAP cube generation

Advantages

Companies that deploy the e-Learning Portal solution enjoy the following advantages:

- reduced expenses for conducting and managing training
- increased learning quality thanks to the use of new communication tools
- increased effectiveness and transparency in corporate HR process management
- seamless integration with existing information systems
- effective, scalable and fault-tolerant learning management

System requirements

- Windows Server 2003 or 2008
- 2 GB RAM
- Windows SharePoint Services 3.0
